Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ruthardt et al. in view of Ratti.

Ruthardt et al. discloses an annular seal member 9 sealing high-pressure fuel within a pressure-introducing chamber 3 may not escape onto a low-pressure side 6 through a gap 18 that is defined between an injector housing 2 and a valve body 7 having a valve piston 26 slidably inserted therein, and which is disposed in the pressure-introducing chamber.

Ruthardt et al. does not teach an annular groove and a seal with a backup ring with a plurality of pawls. However, Ratti teaches a seal having an annular groove 27 and a seal member 10 with backup ring 11 that has a plurality of pawls 24 that fixed to the seal member as shown in figure 3. Therefore, it would have been obvious to one having ordinary skill in the art to have provided the device of Ruthardt et al. with an annular groove and a seal with a backup ring as suggested by Ratti. Doing so would provide a way to maintain good fluid tight relationship (see column 1, lines 65-66).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to show the art with respect to a fuel injector with a seal member: Brinn, Jr. et al., and Reiter.
